

**LiMIT4WeDA project presence at
NSTF Science Expo at Xrobb I-Għagin, Marsaxlokk
21-27th April 2012**

Malta Intelligent Energy Management Agency (through Eng. Albert Falzon) presented the LiMIT4WeDA project activities and disseminated sustainable & energy efficient transport related information at the Science Week event organized by NSTF at the Nature Park and Sustainable Development Centre, Xrobb I-Għagin, Marsaxlokk between Saturday the 21st and Friday the 27th of April 2012.

The Nature Park is the national hub to various activities related with the various aspects of science. The Science Week fair & expo took place throughout the week targeting various age groups. Eng. Falzon explained the various aspects of mobility and energy

MED Operational Programme – Cohesion Policy 2007-2013

related topics within the transport sector as part of the LiMIT4WeDA project which is being carried out by MIEMA.

The crowds of students were coming from primary and secondary education. Eng. Falzon acted as an animator to the brain storming sessions. The main aims of these sessions were aimed to instill a clear perception about Malta's dependence on fossil fuels and the benefits (economic, environmental and social) of developing and using collective transport systems. Pollution was categorized and explained accordingly. These were divided into three main categories: Green house gasses, ozone depletion gasses and particulate matter.

Various kinds of innovative transport application technologies were portrayed to those present. Eng. Falzon described the returns in using electric driven mobility and public transport. In conjunction with the LiMIT4WeDA project, he went on to describe the main aspects of a web enabled ride sharing network. Those present could contribute to highlight both the positive and negative aspects of ride sharing network. Eng. Falzon went on to describe the convolution of virtual social networks with information enabled mobility.

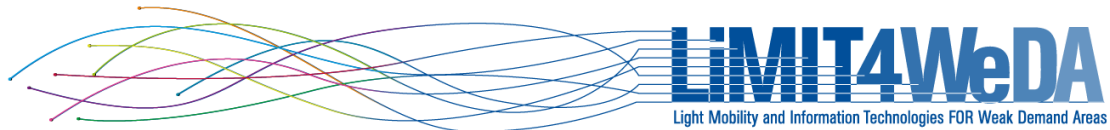

The theme of energy efficient transport was extrapolated to energy efficient driving in the case of privately owned cars. Tips for reducing the car fuel consumption were provided, e.g. not accelerating suddenly since pressing hard on the accelerator pedal causes an inefficient and rich fuel mixture, keeping moderate driving speeds, avoiding sudden braking when it is safe to do so, ensure proper car servicing and lubrication.

There were other talks on site by Edwin Lanfranco about the Malta's flora and fauna; demonstrations by Tim Harrison (Bristol Chemlabs); talks by the Malta Medical Students Association; tours on site about alternative energy by Nature Trust (Malta) and by the MIEMA's engineers; an exhibition of several student projects carried out by primary, secondary students and a Little Scientists' Village by the Institute of Art and Design at MCAST.
